

Dermato-venereological Quiz

SM Wong 黃思敏 and RCW Su 蘇志慰

A 30-year-old gentleman complained of bluish-grey discolouration of bilateral shins for 3 months (Figure 1). He denied having other symptoms except for cosmetic concern. The discolouration accentuated after summer vacation. He had also acne vulgaris and was on medications.

Figure 1.

Questions

1. What are the differential diagnoses?
2. What is the likely diagnosis?
3. What is the likely cause?
4. What are the treatment options?
